4  /*You are a professional robber planning to rob houses along a street. Each house
has a certain amount of money stashed, the only constraint stopping you from robbing
each of them is that adjacent houses have security system connected and it will
automatically contact the police if two adjacent houses were broken into on the same
night.
5
6  .... Given a list of non-negative integers representing the amount of money of
each house, determine the maximum amount of money you can rob tonight
without alerting the police.*/
